

Sean Alter

Valley Stream, NY | (646) 207-2901 | Salter3@mail.yu.edu | [GitHub](#) | [LinkedIn](#) | [Boot.dev](#) | [Macs Live](#)

EDUCATION

Yeshiva University, Yeshiva College, New York, NY

B.S. in Computer Science, Minor in Finance, Distributed Systems Track, Dean's List

Expected Graduation: May 2029

GPA: 3.8/4.0

WORK EXPERIENCE

YU Mac's Live — Technical Director

December 2025 - Present

- Redesign 10+ React components, reducing operator eye strain during NCAA broadcasts of 7,000+ viewers
- Accelerate team selection 4x (4s to 1s) by overhauling an 80-team dropdown into a React fuzzy-search
- Reduce unsafe 'any' type usage by 86% (139 to 19) across the TypeScript codebase, closing type-safety gaps

Yeshiva University – Computer Science Department — Infrastructure Lead

May 2026 - August 2026

- Delivered an equity trading system with 4 peers, guided by Steven Mauceri, Citi Director
- Architected a GitOps pipeline with FluxCD and k3d, automating 15+ microservice deployments
- Reduced startup failures >80% and boot times >30% via strict database and boot-order dependencies
- Created Makefile tooling for 9 Kubernetes operations, enabling pod management without CLI expertise
- Achieved HA, accelerating failover recovery 4x (40s to 10s) via CloudNativePG and Redis Sentinel
- Optimized throughput for 1,000 users via PGBouncer and database indexing, cutting latency 99% (36s to 350ms)

InterSoft Associates — Software Engineer Intern

May 2024 - June 2024

- Boosted efficiency by refactoring 3 essential modules of an internal platform, using ASP.NET and SQL

ITS Department - DRS High School — IT Assistant

September 2023 - June 2024

- Provided on-demand technical support for over 10 classrooms and faculty members
- Diagnosed and resolved hardware, software, and connectivity issues

DRS Live — Co-Director

September 2022 - June 2024

- Reestablished livestream operations, led 90%+ of technical events, and recruited/trained successors

PROJECTS

Obligo

May 2026 - July 2026

- Built a full-stack financial ledger utilizing a Golang REST API, React/Vite, and PostgreSQL
- Configured infrastructure for monolithic and serverless deployments via Cloudflare and GCP
- Constructed GitHub Action pipeline to build/push Docker images and execute 20+ backend tests
- Achieved zero-downtime deployments and sub-15ms p95 API response times via GCP serverless containers

Document Store

January 2026 - May 2026

- Constructed a Java NoSQL document database utilizing bespoke HashTables, Tries, and MinHeaps
- Implemented a B-Tree persistence manager to offload inactive documents from a MinHeap cache to disk
- Created a state-management system via the Command pattern for multi-level undo/redo operations

SKILLS

Languages: Golang, Python, Java, C, TypeScript, SQL, Lua, HTML, CSS

Cloud & DevOps: Kubernetes (k3s/k3d), Docker, FluxCD, GitHub Actions, GCP, Cloudflare, Ansible

Tools, OS & Frameworks: Linux (Arch, Ubuntu, Debian), Git, Neovim, Windows, React, Maven

Interests: Fantasy & Sci-Fi Books, Webnovels, Puzzles, Hiking, Winter Sports, Anime, MTG, D&D

LEADERSHIP

SGC Fellow, El Salvador & Guatemala Mission

May 2026 - June 2026

- Partnered with local NGOs to support educational and social initiatives impacting 300+ community members
- Directed and co-led youth activities, including English tutoring and DIY crafts, overcoming language barriers
